## EDUCATION

### Kennesaw State University

Aug 2022 - Dec 2026

B.S. Computer Science

GPA: 3.9/4

- **Honors:** President's List (4x), Hackathon winner(1x)
- **Relevant Coursework:** Data Structures & Algorithms, Machine Vision, Machine Learning, Database Systems, Computer Organization & Architecture, Fundamentals of Data Communication
- **Technical Skills:** Python, Java, C++, JavaScript, Go, Swift, SpringBoot, Flask, React, PostgreSQL, Appwrite, AWS, Docker, Git, CoreML
- **Spoken Languages:** English, Portuguese, Spanish

## EXPERIENCE

### Kennesaw State University - SURP(Summer Undergraduate Research Program)

Student Researcher - Machine Learning / Medical Imaging

May 2025 – Current

- Engineered and deployed a **3D deep learning pipeline** using **PyTorch**, handling **1000+** patient datasets
- Architected and implemented a data preprocessing system that automated a previously manual workflow with **PyVista/VTK** to handle voxelization and data alignment, cutting data processing time by **70%**
- Improved Vnet model performance by **15%**, integrating masking and center cropping, which also reduced irrelevant computations, and reduced the training time by **30%**

### Kennesaw State University College of Computing Tutoring Center, Marietta, Georgia

Team Lead

Jan 2023 – Current

- Improved students' understanding of programming concepts in Python, Java, C++, and C#, leading to a **5%** increase in average grades for **360+** tutored students
- Provided comprehensive one-on-one and group tutoring in Data Structures & Algorithms, Database Systems, and Foundational programming principles, helping to build a collaborative learning environment

### Resilience, Inc., Tampa, FL

Backend Developer

May 2024 – May 2025

- Architected and developed a full-stack, cross-platform mobile application using **React Native** and a real-time backend to provide support for climate refugees.
- Designed and implemented a scalable database schema in **Appwrite**, integrating robust real-time data storage, authentication, and access control to manage **1000+** dynamic user records securely.
- Optimized development workflow by implementing **Metro Bundler**, reducing build times by **30%** and improving developer productivity

Intern Backend Developer

Dec 2023 – May 2024

- Engineered a backend service on **AWS** using **Python** to process audio data and utilized **Swift** with **CoreML** for efficient on-device model inference.
- Automated the data augmentation pipeline for audio recordings, which improved the **machine learning model's performance by 30%** and increased its predictive accuracy to **95%**
- Designed and deployed **RESTful APIs** using **Flask** and **AWS Lambda** to enable seamless communication between the backend service and client applications, ensuring scalability and reliability.

## PROJECTS

### Petition Generator

Full Stack Developer, Java, SpringBoot, Python, React,

Sep 2024

- Developed a Full-stack web application using **Java(SpringBoot)** and **React** that generates legal petitions, reducing document creation time by **60%** for lawyers. Tested and validated by **10+** lawyers, improving workflow efficiency
- Built secure **RESTful API** endpoints with **JWT authentication** to ensure data integrity and user privacy.
